"If a country is to be corruption-free and become a nation of beautiful minds, I strongly feel there are three key societal members who can make a difference. They are the father, the mother and the teacher."

Abdul Kalam

Happy Independence Day!!

INDEPENDENCE DAY

Independence Day is a National Festival of India celebrated on 15th of August every year. India became a free country on this day and it's only then we could secure our democratic rights as citizens of India. Our Independence gives us the reason to enjoy our fundamental rights laid down by the constitution. We are now a self-governed democratic country and have the voting rights. The feeling of self-reliance and freedom fills the heart of the citizens with supreme happiness and joy. It is all due to the tireless efforts and numerous sacrifices of several great people who sacrificed their lives without any fear.

ASST. PROFESSOR (CE)

ADVANCEMENT OF CABLE STAYED BRIDGE IN INDIA AND CASE STUDY OF VIDYASAGAR SETU

Abstract: Cable-stayed bridges have been compared to the masts of majestic sailing ships, proclaimed as monuments and recognized as engineering marvels. Construction technology and material science for bridges have been an important part of advancing cable stayed bridge technology. As in India these bridges are subjected to heavy vehicle load as well as most of the states are in seismic zone iii and ii the advancement of cable stayed bridge is needed. Material advancements introduced into bridge applications include self-consolidating concrete, stainless steel, higher strength concretes and composite fibers

New sensor and data communication technologies allow for real time monitoring of bridge information. Over time, technology has also changed the way bridges are designed, with enhancements in software and hardware to model structural behavior, refine elements of the design and produce final designs more quickly.

Why this structure is chosen: Cable stayed bridge is an innovative structure and is preferred to conventional steel suspension bridges for long span mainly due to the reduction in moments in the stiffening girders resulting in smaller section of the girders leading to economy in overall costs. A manifestation of constructional excellence, Vidyasagar Setu is longest cable stayed bridge in Asia. Kolkata, as per the Bureau of Indian Standards map, is between seismic zone 3 and seismic zone 4 but Professor S K Nath of the Department of Geophysics and Geology, IIT Kharagpur, feels many areas of the city face high seismic threat. Top metros like Delhi, Mumbai, Chennai and Kolkata fall under moderate to high risk seismic zones of the country.

Design Concept Overview: The concept of a cable-stayed bridge is simple. A bridge carries mainly vertical loads acting on the girder. The stay cables provide intermediate supports for the girder so that it can span a long distance. The basic structural form of cable-stayed bridge is a series of overlapping triangles comprising the pylon, or the tower, the cables and the girder. All these members are under predominantly axial forces with the cables under tension and both the pylon and the girder under compression. Axially loaded members are generally more efficient than flexure members. This contributes to the economy of a cable-stayed bridge.

Technical Overview: The cable stayed bridges can be subjected to different kind of loads like Live Load, Dead Load, Wind Load, Seismic Load, Dust Load, Accidental Load , Errection Load, Frost Load, Thermal expansion ,Corrosion. As well as it have to overcome such natural fury like hurricane Tsunami, Heavy Vibration due to heavy load. Modern techniques can be very effective to overcome this type of problems.

Making the bridge Hollow using truss:

It will allow the wind to pass.

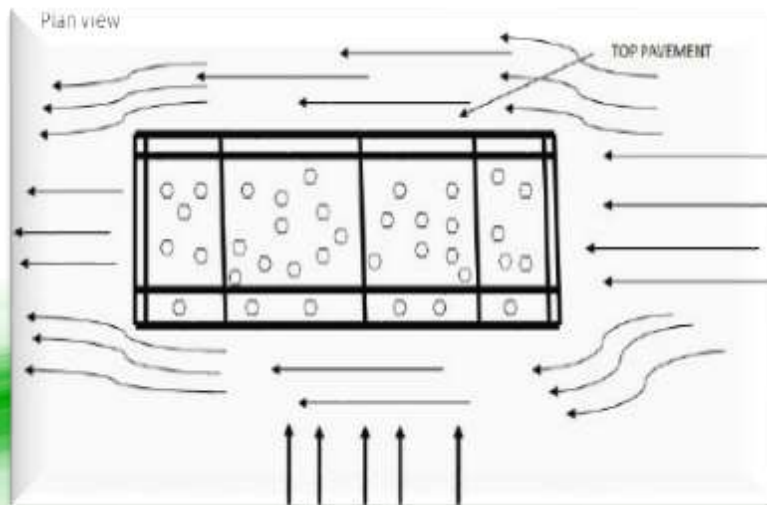

It will help to reduce the generated vertical force.

Making the Pylons Hollow High strength steel: If the Pylons are made by hollow section then the dead load will be reduced and for high strength steel the strength of the bridge will be same or even more.

Use of Pendulum: At the time of earthquake the pendulum will be very effective. The pendulum will move along $-x$ direction when the pylons move along $+x$ direction. That will reduce the magnitude of movement of the pylons. Thus the pylons will be safe from collapse.

Use of CFRP (Carbon Fibre Reinforced Polymer): The pylon as well as the fibres can be corroded .So the corroded members can be warped by CFRP. That will be so effective than replacing the member.

Conclusion: The Second Hooghly Bridge at Howrah, West Bengal is one of the latest state-of-the-art bridge in Kolkata. Evolution of bridges from Simply-Supported to Balanced Cantilever to Suspension Bridges to Cable Stayed Bridges took years. The challenge was to span a large gap without disturbing the navigation of wide rivers. Two other important issues that will come up in future are health monitoring and maintenance. Non-linearity due to built-in stresses makes determination of Eigen-values, which are signatures of a simple structure, is no longer straight forward. Hence these questions should be addressed. Monitoring instruments for assessing changing parameters such as deflection, time-depending material properties, joint slippage, corrosion, etc. are to be assessed and rectified if necessary.

O Our Nature

Nature, nature o our inner piece.

Full your circumstances with joy,

Feel every mode of happiness,

Every light, Every sound,

Aerate in every mind

Every mode of humanity,

helps to see the blind....

Try's to touches light of life;

O our nature helps us to see your gesture

Your cosmology, Your genetics,

When there arise questions

by destroying your creation,

We are there to mollify them

O nature we all care you

YOU

Your truth is a lie to someone;

Your struggle is someone's muse.

Your tears are a burden to them;

Your pain is pointless and fake.

All you wanted is to share

The warmth of his chest,

Your heart beating against his,

Making a subtle resonance.

You wanted to hide yourself

In his arms, to hide your insecurities,

Your doubts, your fear, your rage;

Captivated in his words and his smile,

You were mesmerised and lost.

Win of Sorrow

Put the sorrow from you far away –
Come out in new environment from obstructed.
Sadness which collected in your mind,
Forgot the peace for that long away.

New life is in front,
Forget about sadness.
Will have a peaceful mind,
Will get a blessing life.

If you can earn the peace –
Happiness will come in your mind.
Fly away in new peace world,
Will win through your mind, in your life.

Science behind Vaastu Shasta

Vaastu, in the simplest words, is the science of direction that combines all the five elements of nature and balances them with man and materials. It has rules, formulas and patterns for the construction of houses. It is believed to bring in harmony and aimed towards drawing positive cosmic energy into people's lives. The science behind this is that vaastu calculates rainfall, sunrise and sunset to figure out the ideal way to construct a house

Since the whole universe is a composition of five basic elements: Fire, Air, Space, Earth and Water. Through these, our body receives Internal Energies in the form of Proteins, Carbohydrates, Fats etc. and External Energies in the form of Heat, Light, Sound, Wind and so on. The basic principles of Vaastu enables us to achieve balance among these ; giving more flexibility of body & mind for a better life .

Characteristics of a Science : Any science possesses the following characteristics.

- 1. Rational :** Based on cause and effect.
- 2. Practicable:** Capable of being put into practice.
- 3. Permanent :** Not bound by the barriers of time.
- 4. Normative:** Codified and governed by principles.
- 5. Utilitarian :** Useful to the society.
- 6. Universal :** Acceptable and accessible to one and all.

Let us see whether Vaastu, has got all the above mentioned characteristics, so as to be termed as a science.

1. Rational: Vaastu is a systematic study of the geological impact of the rays of sun on earth. The geological conditions caused by the above impact, prove to be congenial for the construction of an ideal house. The above fact is amply proved by the fact that the residents of the houses possessing projections towards east, north and northeast tend to lead prosperous lives, while the residents of houses having wells or pits in Southeast, Southwest and Northwest often face worries and troubles. Since Vaastu reads the characteristics of the houses and explains their effects on the inhabitants in a

scientific manner, we can undoubtedly say Vaastu is a science.

2. Practicable: Vaastu is practicable, as it is capable of being experimented. Those who want to construct a house can follow the characteristics of an ideal house prescribed by Vaastu and lead carefree, happy lives there in. What all they have to do is, to follow the guidelines prescribed by Vaastu, in providing doors, windows, earth, well bathroom and toilets. Further, the above characteristics can be utilised for rectifying the existing houses, which are not built as per Vaastu and reap the advantages.

3. Permanent: The effect of Vaastu is permanent. This is also, because of the binding between the Earth and the Vaastu. The earth has been revolving around the sun, in a geostationary orbit for over 460 crore years. Its due to and into it the magnetic effect caused by its rotation. Due to the magnetic properties of earth, the magnetic needle of a compass always tends towards north. Since Vaastu is based on the permanent property of the earth, the effect of the principles of Vaastu also becomes permanent.

4. Normative: Vaastu prescribes certain rules and regulations, which are governed by the principles based on geological conditions and the

inalienable properties of the earth. For instance, sinking of a well in North-East, elevation of plot in South, are the norms prescribed by the Science of Vaastu.

5. Utilitarian: Any science which is not beneficial to the humanity becomes useless. Man continues to work for the invention of the items, which render his life happier and happiest. Similarly, the sole aim of Vaastu happens to be to make the lives of the individuals on earth, more and more comfortable, through habitability.

6. Universal: The genesis of the science of Vaastu lies in the tie between the earth and the sun. Since these two planets are of universal nature i.e. beyond religion, caste, nationality etc., the science of Vaastu which studies their impact on human beings also becomes universal.

Vastu Tips

It's recommended that the bedrooms be placed in the South Eastern direction. The explanation behind this is that bedroom needs to remain fresh and requires a lot of air circulation. So when placed in this direction the South East wind maintains fresh air circulation in the room. Puja room is a must in every house. And we all know that North East is the most auspicious direction. But the constant confusion about whether you should face the divine direction the idols should be facing towards it remain as it is.

Here's the solution – one must face towards the North-East direction while doing prayers.

Main door is an important element in Vastu. All the doors especially the main door should open inside so that the energy remains inside. Also, do take care that the hinges of doors should not make noise. Grease them periodically to keep them noise-free.

If you have a beam running inside the room wall, take care that the bed should not be placed under the beam. This arrangement is bad for health.

Always make sure to keep the center of home a free area for the free flow of energies. This is important for positivity in the house and for health and prosperity.

If there is space outside your house or an empty wall, then place a Ganesha idol or a frame. Lord Ganesha is considered to ward off the evil and bring prosperity to the house.

A tastefully designed living room speaks highly of the inmates of the house! Ensure that the living room is well arranged and clutter-free.

The heavy furniture like sofa set, couches, or divans can be placed on the south-west corner, while the electronic appliances can be placed on the south-east section of the living room.

Southwest direction is an ideal location for your bedroom; it brings good health and well-being.

There shouldn't be a bathroom near the main door.

Do not have any cactus in the house. Having it outside the boundary is good.

The rays from morning sun help in purifying water. So the water storage tank should be in the North eastern corner in a multi storied building. To facilitate absorption, plastic water tanks are to be avoided and in case it's plastic, dark colors like blue or black must be used.

SNEHASHREE MONDAL

2ND YEAR,C.S.E

Always It's you

I clearly remember
The day I saw you for the first time.

I clearly remember
The words you said to me every time.
The emotions left unsaid,
I clearly remember.
Because everything is all about you.

In every little thing related to you,
Most precious thing to me
As you are the only person I've ever seen.
And I still remember
You are the only reason of my smile.
The way you melt my heart,
I still remember.

I want a walk
To remember.
May be you want thousands of roses
Bt I'm just a single sick rose.
You can through it

But you can also reserve it in your secret diary to
remember.

I can't give you anything at the end of the whole
day,
But I'll say you "you are the best of me", holding
you hands tightly.

Because every time always it's you.
Only you.

NATURE

Look at the sunshine
What a beautiful day!
Under the trees,
We can run and play.
we pollute nature.
What will happen to it in the future?
By cutting down trees
How long is Mother Earth going to live?

Nature is getting older and older.
Are we going to live longer?
The worst and worst we give,
The shorter and shorter the nature lives.

FIRE AND ICE

Some say the world will end in fire,
Some say in ice.
From what I've tasted of desire
I hold with those who favor fire.
But if it had to perish twice,
I think I know enough of hate
To say that for destruction ice
Is also great
And would suffice.

Nothing Gold Can Stay

Nature's first green is gold,
Her hardest hue to hold.

Her early leaf's a flower;
But only so an hour.

Then leaf subsides to leaf.

So Eden sank to grief,
So dawn goes down to day.

Nothing gold can stay.

Save Girl Child

Let me live
Let me bloom
Let me shine
Like a beautiful moon
Let me come and
See the world
Let me fly
Like a beautiful bird
Don't be cruel
Oh! Selfish!
Let me swim
Like a beautiful fish
Listen to my cry
Listen to my scream
Let me fulfil
My wishes and dreams
Let me see this
Beautiful Earth
Please don't kill me
Before my birth.

MOHIT YADAV

2ND YEAR,C.S.E

The School Farewell.....

The truths now unfold
The story is now told
Crying eyes
Hidden lies
Just too many goodbyes
Now it is forever like before
But now the different
I have closed the door
Sorry is just a word
And now the memories will become
blurred....

Friendship

Friendship is a bond between you and me
That no one else except us can see
Together we talk, together we stay
This is a bond that never shall decay.
Love is what we share,
As for each other we do care
Seeing in your eyes a bit of sorrow
I cannot even live till tomorrow,
And if I see you cry
To make you happy is what I try.
If you are lost in the middle of a sea,
You will find no one there except me.

Hungry Heart

When love has come in my heart
I started to see beauty in everything
A little bit of love can go long....
 Long way.....
Finally found my one true love
 As true as one can be.
My life has changed forever
 Seeing you
My hungry heart just want you.

I've looked for you in a lonely house,
 In a full moon night, I see you.
In moon's faded light I feel you...
 I know that you are not to me
 But..
My hungry heart just want you.

When love has come in my heart
I started to see beauty in everything
A little bit of love can go long.....
 Long way.....
Finally found my one true love
 As true as one can be.
My life has changed forever
 Seeing you
My hungry heart just want you.

I've looked for you in a lonely house,
 In a full moon night, I see you.
In moon's faded light I feel you...
 I know that you are not to me
 But..
My hungry heart just want you.

A Loyal Friend

You are a ray of sunshine
In a world that sometimes grey,
The magic of your company
Will brighten up the day.
You have guided me through bad times
Wiped away my tears,
And brought me so much joy
As we've travelled through the years.
It warms my heart to know
You choose me as your friend,
A loyal, loving person,
On whom I can depend.
If I could have one wish I'd make it
just for you, I'd ask God for his
blessing
In everything you do.

Afforestation

Can we replace all the devastation
We created through the greed of
Urbanization, cattle ranching
And paper handling?
Can we plant the seed of Eternity,
Allow our own bodies to breathe,
The purity of serenity?
Live on the earth in peace,
The land of overflowing with trees
Of wisdom,
Or we are just waiting
For the last seed to recede,
Intro poverty and hunger?
Afforestation or starvation,
Echoes through the silent trees
Of lost humanity.

Global Warming

Global warming is heating the planet by regular increase in the average temperature of Earth's surface due to the release of excessive amount of greenhouse gases in the atmosphere. There are various types of green house gases (such as carbon dioxide, carbon monoxide, chloro fluoro carbon, sulphur, etc) playing a big role in enhancing the level of global warming. High temperature causes melting of ice and snow thus reduction in amount of ice and snow, change in water cycle, rise in sea level, change in climate, change in weather patterns, and lot of changes in the natural cycle which participate in the global warming. Such huge changing events have forced people to think seriously and take decisions against these changing patterns of environmental parameters.

It has been a serious issue and putting our future at risk as well as existence of life on the earth. It is considered that deforestation and rise in carbon dioxide level is primary issue of increasing global warming. Emitting greenhouse gases from vehicles and CFC gas from air-conditioners are very dangerous as they are empowering this demon. Such gases especially CFC erode the ozone layer and make holes which pass ultraviolet rays and affect living beings on the earth. Increasing sea level creates the fear of submerging coastal regions and completely finishing few islands in near future thus making people homeless. Overpopulation causes overuse of natural resources and technologies which is not good for welfare of human beings.

I Fight For

I fight For them
Who have been before me
I fight For them Who are still not free
I fight For them Who are in tears
The joy of being alive
Encompassed by their fears
I fight For them
Who have to think long About what they want to
wear
Their touch Their voice Their freedom Their
choice
Their wails resounding in my ears
Thank you world
Because now,
I fight To stand out
And to stand against
My chauvinistic peers.

My Best Friend

I still remember the first day we met. We were too shy to say much at all. It's funny to think back to that time, Because now we're having a ball! They say that true friendship is rare, An adage that I believe to be true. Genuine friendship is something that I cherish. I am so lucky to have met you. Our bond is extremely special. It is unique in its own way. We have something irreplaceable. I love you more and more each day. We've been through so much together. In so little time we've shared , I will never forget all the moments That you've shown me how much you cared. Friends are forever, Especially the bond that you and I possess. I love your fun-filled personality. Somehow you never fail to impress. The world could use more people like you. It would certainly be a better place. I love everything about you. You are someone I could never replace. You are always there for me When my spirits need a little lift. I cannot thank you enough for that.

Save Water, Save Life

Water is necessary for life. Water is needed for domestic, agricultural and industrial purposes. Three-fourth of Earth's surface is covered by water bodies. 97 per cent of this water is present in oceans as salt water and is unfit for human consumption. Fresh water accounts for only about 2.7 per cent. Nearly 70 per cent of this occurs as ice sheets and glaciers in Antarctica and other inaccessible places. Only one per cent of fresh water is available and fit for human use. So it is very important to conserve this precious resource. And yet we are contaminating the existing water resources with sewage, toxic chemicals and other wastes. Increasing population and rapid urbanisation has led to over-use of water resources leading to water pollution and scarcity.

Water scarcity can be defined as a situation when people don't have enough water to fulfil their basic needs. India is one of the many countries that are facing water scarcity today. In Rajasthan and some parts of Gujarat, women have to cover long distances on foot in order to get a pot of water

In cities like Bangalore, a family has to spend from Rs. 15 to Rs. 20 to meet their daily water needs. The problem becomes severe during summer months when availability of water decreases again. A recent study has revealed that about 25 per cent of urban population lack the accessibility to fresh water. Also there are several cases of privatisation of water bodies. This often leads to water scarcity in the nearby areas.

There are different methods to deal with water scarcity. Rain water harvesting is the best and most suitable method. Forest and other vegetation cover reduce surface runoff and recharge ground water. So, practise afforestation. We can also promote water conservation through media and by conducting public awareness programmes

By practising these simple steps we can conserve water and ensure the availability of water to future generations. So don't tarry; start saving each and every drop of water. Let our motto be "Save water, save life, save the world"

PUBG: Impact on Youth And Modern Society of India in 2019

Video games or games in general over all the various platforms have been gaining a lot of success recently and the interest keeps on rising.

We all have played video games or **games** on the PC or on a **Smartphone**. So, keeping in mind this platform of playing games, let's talk about one of the most popular **mobile games** out there today: Player Unknown's Battlegrounds, in short **PUBG**.

This **game** has become extremely popular and rightly so, as it has all the elements of a **game** that players look forward to. With its fast-paced action, a variety of guns and ammunition, **different modes to play** from and with different maps to choose from, players have a good time enjoying the action-packed **game** which keeps players play all the time. But, due to its amazing **gameplay** and other cool features, some find it very hard to stay away from it.

In some cases, it leads to extreme addiction. Also, according to a few people, this game tends to encourage violence and thus feel that the impact

of **PUBG** on youngsters and society is negative. So, without further ado, let's discuss the impact of **PUBG** on youngsters and society as a whole

The positive effect of the PUBG

Many scientists and psychologists find that video games can actually have many benefits – the main one is making people smart. “Video games change your brain,” according to University of Wisconsin psychologist C. Shawn Green playing games alter the brain's physiological structure in the same manner as do learning to read, navigating using a map, or playing the piano. Much like exercise can build muscle, the effective combination of concentration and rewarding surges of neurotransmitters like dopamine strengthen neural circuits which can build the brain.

When you play with your friends, you talk to them and you stay in contact with them. That's really a very nice thing.

PUBG makes you response faster than you use to do. One of my patients was really scared of centipede in her whole lifetime. Then, she started playing PUBG. After some days, she saw a centipede in the bathroom. She wasn't afraid, she wasn't violent, she didn't scream for the first time. She took the action immediately and throw that centipede out. This way it makes reflexes fast.

The negative effects of PUBG

Most of the bad effects of video games are blamed on the violence they contain. That's what people says about PUBG as well. Children who play more violent video games are more likely to have increased aggressive thoughts, emotions, and behaviours, and decreased helping others.

I myself also played this game for few days. And my personal experience is- PUBG is a very addictive game. You can't get asleep while playing this. You spend or waste a hell lot of time on PUBG. And also, you not only spend your time on playing but also on watching others on streaming channel and YouTube. I also faced a kind of heaviness when i started playing because of too much concentration it needs. But, later on this got resolved. Don't know about other, but I love this game until and unless this is a huge addiction.

These days many news coming out regarding PUBG like, [*The teenager jumped to his death from his uncle's fourth-floor flat in east China.*](#)

What I suggest is just don't make this battleground game your addiction.

Evil Inside Me

Just being a bit of dramatic like, You can't change my thoughts and prayers. I was born to know the world. Not to be a slave at your knees. I am soulfully ruined every time, But I still build my own empire outside. Do you know what gives me strength? The evil inside me and the smile on my face. The evil inside my body tells me "Come on with your ideas and ruin the world". The smile on my face speaks "Everything has a right time to happen". Well it just two faces on the same body And both of them speaks. Witnessing them I am today what I am Possessing and imagining. I try to use both the powers at the right time, Wickedly I ruin the place where I stand Smiling .I love to see everyone happy, I may build a beautiful palace for my dreams. But at the same time I build a hell to live in And that's what I do in real It's not just a poem to express. Through this poem I want to say "This is the real me, REAL ONE". And yes I love the I live in I have the power to hold the world in one hand. You all follow your rules but I create my own rules and let the world follow them.....

More Depression Treatments Should Include Exercise

After assessing numerous specialist studies, a new review concludes that exercise can help to both prevent depression and treat its symptoms. However, current treatments for depression often fail to include this lifestyle adjustment, despite the strong evidence. A new review of the specialist literature emphasizes the need to add exercise to recommendations for the treatment of depression. Both anecdotal and scientific evidence has suggested that physical activity can be a great ally in fending off or fighting the symptoms of depression, which affects around 40 million adults in the United States each year, according to the Anxiety and Depression Association of America. "The evidence of the use of exercise [for the management of depression] is substantial and growing fast," write Felipe Barretto Schuch, from the Universidade Federal de Santa Maria in Brazil, and Brendon Stubbs, from King's College London in the United Kingdom.

Schuch and Stubbs have recently conducted a review of the literature looking at the effects of exercise on the risk and symptoms of depression. In their paper — which now features in Current Sports Medicine Reports — they conclude that exercise is indeed an effective "medicine" against depression in most cases. The authors also found that many programs dedicated to treating depression do not include exercise in their list of recommendations for the prevention and treatment of the condition. Typically, specialists will recommend antidepressant drugs and psychotherapy for managing clinical depression. The authors of the current review argue that diversifying the approach even more — by suggesting physical activity as a lifestyle adjustment — could boost the effectiveness of therapy.

"Some guidelines have incorporated [physical activity] and exercise as recommended therapeutic strategies for depression while others have not," Schuch and Stubbs write. "Despite this acknowledgment, [physical activity] still appears to not receive the deserved attention, and its use in clinical practice is not of equitable value to the more dominant strategies, such as pharmacotherapy and psychotherapies

The College Life

College life is a person's golden period of early youth. He remembers it in his whole life. He can never forget it. The period of college life may be two years of intermediate classes. It may include two more years of graduation. College life is a life of freedom. There is no fear of teachers. The teachers behave in a friendly manner. The students feel no compulsion in studies. They develop a sense of duty and study. They may go to the library or canteen or playground in spare time. They may move with friends of their own choice. They develop self-confidence. They realize self-importance. They learn good manners. They dream of becoming of officer and engineer after studies. Functions, tours, and sports are other aspects of college life. They are very happy occasions. They are memorable events of the student's life. The students enjoy them very much. On these occasions, they take photographs of friends, teachers and guests.

They also take photographs of attractive scenery. College life has some pitfalls also. Some students misuse the liberty. They give up their studies. Some students develop quarrelsome habits. They form terror groups. They disturb college administration. They tease other students. So their educational career is destroyed. Some students are misguided by selfish politicians. They like sabotage and strikes. Some students take too much interest in sports and other co-curricular activities. They ignore their studies. The students should avoid such harmful things still.

1ST YEAR, CSE

Save Girl Child

The status of girls in the Indian society has been greatly debated for many years. Girls are generally believed to be involved in the cooking and playing with dolls while boys to be involved in the education and other physical activities from the ancient time. Such old beliefs of men have simulated them for violence against women which resulted in the continuous decrease in the number of girl child in the society. So, there is a big need to save girl child in order to equalize the ratio of both as well ensure the development of country

Effective Steps regarding Save Girl Child

Following are the various effective steps to save girl child:

1. The position of girl child in Indian society is backward since ages because of the extreme desire of parents for the boy-child. It has created gender inequality in the society and has been very necessary to remove by bringing gender equality.
2. Extreme poverty in the society has created social evil against women as dowry system which worsens the situation of women.

Parents generally think that girls are only to spend money that's why they kill girl child before or after birth in many ways. Such issues need to be removed urgently in order to save girl child. 3. Illiteracy is another issue which can be removed through proper education system for both genders. 4. Empowering women is the most effective tool to save girl child. 5. People should be aware through some effective campaigns regarding save the girl child. 6. A girl child is unsafe inside as well as outside the mother's womb. She has fear in many ways all through the life with the men whom she gives birth. She is ruled by the men whom she gives birth and it is totally the matter of laugh and shame for us. Education is the best tool to bring revolution of saving and respecting a girl child. 7. A girl child should be given equal access and opportunities in every field. 8. There should be safety and security arrangement for girls at all the public places.

Conclusion

Save girl child is not taken by the people as topic only, it is a social awareness which should be taken very seriously. People should save girl child and respect girl child as they have power to create a whole world. They are equally needed for the growth and development of any country

A Soldier

I did my duty.

I paid the supreme price,
I pray you will remember,

My sacrifice.

My life was short

I did my best,

,God grant me peace

I my eternal rest.

There is a lot that social media can do. But it is an unarguable fact the presence of social media has made our lives convenient, easier and much faster.

Social Media And Its Impact

We live in a time and age where information is just a button press away. We are swayed by information all around us. We millennial want to know, read, understand and then speak our minds about it. That is where social media comes into play. Social media is one of the biggest elements that we live with and cannot ignore it . Social media is collection of websites, applications and other platforms that enable us to share or create content and also helps us to participate in social networking. Social media is not limited to blogging and sharing pictures, there are lot of strong tools also that social media provides. That is because that the impact of social media is very high and far reaching. It can make or break images . But social media is a topic of controversy today, many feel it's a boon but there is a majority who feels that it is a curse. Mostly people feel that social media has destroyed human interaction with a rapid rate and has modified modern human relationships. But there are others who feel that it is a blessing that has connected us to every part of the world , we can meet our loved ones that are far, we can spread awareness through it, we can send security etc

Life

Life is something which is simple but we insist to make it complicated.

Life, What I mean Scientifically ?

If we say this word , it is type of energy which is neither destroyed nor created .

This would be little Complicated. Life has its own definition .

As, consider the people living in different Strata. As a poor man lives a life of hardship on the other hand, a man with luxury will be with all comforts. But life, is actually what you make it, worry about your future would be worthless because life and your future depends on you.

And it is up to you that what you make it.

So, Stop worrying about your life, only just make efforts to make your life. happy. At last I want to say that "Live in the present, don't worry for future"

My Hostel Life

I think hostel life is the best life for every student if you have got some good friends. Now I am 1st year ME student of Dream Institute Of Technology. But I was staying in the hostel for 1st time at 11th class. So now I am telling about my past hostel life(11th&12th). When the first day my parents left me in hostel next day I went to home .I told me my mom, I can't stay in hostel because I can't leave with out you & cried for 30 min. But I was longing for the three days long weekend which was about to come in two days. After that I never cried in hostel for staying with friends without parents except once when I felt depressed. Those days when mobile were prohibited inside the hostel permission. I should always have a watch on the door to see if warden sir comes then I would hide my phones like an involuntary action if someone enters into the room. Actually I had eight friends & we stay on single & we dorm their own place. The most important thing is that my first love that my first love that can't be described. I have never been with so much of people ever before.

At home I used to wake up only after 8'0 clock but in hostel I had to wake up before 5'0 clock only to bathroom because there have only three bathroom. Every morning & evening at 6'0 clock I did prayers with all the hostel student. On the holiday I sleep till 11&12 in the morning after the complete the lunch I played with my friends like as cricket, football, tennis eta.

Every day I would keep talking, chatting, playing game on my mobile that bought myself but I don't telling about my parents. I used my phone at late night & forget to purposes of coming to school. But the exam time i can't sleep before the exam day. After the 12th exam when we are coming home & thinking that I can't 1st without my friends & cried for long time with them. Now when I think that we are enjoying, entertaining, foolishly to each other and then tears comes out in my eye, that time I feel very alone. So I told u ho stel life is the best life ever & ever that you can't forget that time of story can be happened you.

The True Sign of Intelligence is not Knowledge but Imagination

What comes to your mind when you hear the name Jack Ma? 'Alibaba.com', right? Well, the most astonishing fact is that the founder of largest ever IPO in U.S. is not a coder or a technician! Imagination was the only seed of his successful venture. When an apple fell on Sir Isaac Newton's head he thought something unconventional. He thought that earth was applying a force on the apple and thus it fell. No one before him had thought of this. Through the tunnel of knowledge, this kind of thinking is impossible. We need to breath the air of imagination in order to produce such a quality thinking.

Let's **celebrate** the glory
of a free India and uphold
the **pride** and **honor**
of being an **Indian**.

Happy
Independence
Day
